

Technical Data Sheet

Adjustable Clamps

Product Group 109, 159 & 163

Connecting Technology

H.W. ECKHARDT
CORPORATION
ENGINEERED FASTENERS

Choice of engagement positions: clamp can be adjusted to several nominal diameters

Inner ring with radial guidance: effective and powerful all-round sealing

Clamp ear: simple and fast installation, visible deformation provides evidence of proper closure

Burr-free strip edges: reduced risk of damage to parts being clamped

Connecting technology: ideal for soft materials

Adjustable Clamps Product Group 109, 159 & 163

Material

PG 109 zinc-plated steel band

PG 159 & 163 Stainless Steel, Material no. 1.4301/UNS S30400

Corrosion resistance according to DIN EN ISO 9227

PG 109 \geq 96 h

PG 159 \geq 1000 h

PG 163 \geq 1000 h

Adjustable Clamps PG 109

Size range	width x thickness
29.5 – 122.0 mm	7.0 x 0.75 mm
29.5 – 122.0 mm	9.0 x 0.75 mm

Adjustable Clamps PG 159

Size range	width x thickness
25.0 – 50.0 mm	7.0 x 0.8 mm*
40.0 – 110.0 mm	7.0 x 0.8 mm*

Adjustable Clamps with radial guiding PG 163

Size range	width x thickness
30.0 – 116.0 mm	7.0 x 0.6 mm
72.0 – 132.0 mm	9.0 x 0.6 mm

* Diameter range covered by a single clamp

Some sizes are only available if an appropriate minimum quantity is ordered.

PG 159 – Adjustable Clamps:

Version with interlock outside
May make installation easier

PG 109/159 – Adjustable clamp:

Version with interlock inside

The data in this catalog are based on many years experience. They are intended for reference, not as design specifications.

Clamp ear (closing element)

Using tools designed by Oetiker, the clamp is closed by drawing together the lower radii of the “ear”. The maximum diameter reduction is proportional to the open “ear” width (s). The theoretical maximum reduction in diameter is given by the formula:

$$\text{Max. diameter reduction} = \frac{\text{Ear width (s)}}{\pi}$$

Multi-position interlock

The interlock consists of one or two load-retaining hooks that withstand tensile loading during closure and a lock tab designed to hold the hooks in their windows prior to closure. With both designs the interlock can be engaged in several positions within the published range. This feature allows a single part to cover a range of diameters.

Adjustable Clamps with radial guiding (self-aligning design)

A tab formed on the inner portion of the clamp locates in a slot in the outer band surface. During assembly and closure, the tab slides in the slot and so avoids any step around the inner circumference of the clamp.

Assembly Recommendations**Product Group 163 – Adjustable Clamps with radial guiding**

The clamp can be installed axially on the application prior to assembly or alternatively, radially around the assembled components. For either method, it is important that the hooks and lock tab are engaged in windows giving the smallest possible diameter, so that the maximum clearance between the assembled components and the inside diameter of the clamp before closure is no greater than 1.5 mm. Each incremental step of the interlock reduces the diameter before closure by 1.6 mm on the “3-step” series, and by 1.05 mm on the “6- step” design.

Product Group 109&159 – Adjustable Clamps

PG 109 Adjustable Clamps are supplied pre-shaped and engaged at mid-diameter. PG 159 clamps are supplied flat. The clamp must be shaped prior to assembly. Each incremental step of the interlock reduces the diameter before closure by approximately 1.6 mm. The following assembly steps demonstrate how best to achieve an effective geometry.

The clamp ear of both variants should be closed with constant tool jaw force, this practice is referred to as “force priority closure”. This assembly method ensures that a uniform and repeatable stress is applied to the application with a constant tensile force on the mechanical interlock.

Clamp installation monitoring and process data collection are available by incorporating an “Electronically Controlled Pneumatic Power Tool Oetiker ELK” in the assembly process.

Closing force

The closing force must be chosen to give the required material compression or surface pressure and should be qualified by dimensional evaluation and experiment. The resistance against the clamp equals the applied force, so the closing force is greatly reduced when compressing a soft material. The table below gives the maximum applied closing force for clamp and material dimensions.

Important

Single tool stroke closure only, do not apply secondary crimping force.

Installation data

Material dimensions (mm)	Size (mm)	Closing force max. (N)	Installation tools force-monitored ¹ :			
			Manual	Pneumatic	Cordless	Electronically controlled
PG 109						
7 x 0.75	29.5 – 122.0	1400	HMK 01/S01	HO ME 2000	CP 01	HO EL 2000
9 x 0.75	29.5 – 122.0	1800	HMK 01/S01	HO ME 2000	CP 01	HO EL 2000
PG 159						
7 x 0.8	25.0 – 50.0	2400	HMK 01	HO ME 3000	CP 01	HO EL 3000
7 x 0.8	40.0 – 110.0	2400	HMK 01	HO ME 3000	CP 01	HO EL 3000
PG 163						
7 x 0.6	30.0 – 50.0	1800	HMK 01/S01	HO ME 2000 – 3000	CP 01	HO EL 2000 – 3000

9 x 0.6	72.0 – 132.0	2800	-	HO ME 3000	CP 01	HO EL 3000

For an alternative option, see our manual pincers on page 104

¹ Further information on page 84

Important note

These figures are intended as a guide, they may vary depending on the type and tolerances of parts being clamped. To ensure optimum clamp selection, we recommend making functional tests with several assemblies.

Assembly instructions

PG 159 – Version with interlock outside

Step 1
Pre-shape clamp.

Step 2
Determine the clamp length.

Step 3
Cut off the remaining material.
To avoid possible injury deburr
cut edges with a file.

Step 4
Place the clamp over object.
Engage interlocking hooks
in tightest window position.
Firmly crimp the ear with
Oetiker pincers.

PG 109 & 159 – Version with interlock inside

Step 1
Pre-shape clamp.

Step 2
Determine the clamp length.
Make sure the end of the
clamp passes the "ear", as
shown.

Step 3
Cut off the remaining material.
To avoid possible injury deburr
cut edges with a file.

Step 4
Place the clamp over object.
Engage interlocking hooks
in tightest window position.
Firmly crimp the ear with
Oetiker pincers.
